

API Endpoint: POST /api/sites - Create a new site

Payload: {title, domain, primary_color, secondary_color, logo_url, layout (string - optional)}

Required: title, domain, logo_url, primary_color, secondary_color. Domain must be unique. Colors accept hash code (#121212). Layout: optional string field, accepts only valid theme element names saved in the system.

SN	Test ID	Test module	Test scenario	Test steps	Test data	Expected output	Actual output	Test result	Remarks
1		Site Add - Valid	create site with all valid fields in payload			Site should be created successfully response code: 200			
2			create site with mandatory fields only in payload			Site should be created successfully response code: 200			
3		Title Field - Valid	create site with title at max char limit (255) in request body			Site should be created successfully response code: 200			
4			create site with title at min char limit (1) in request body			Site should be created successfully response code: 200			
5		Title Field - Invalid	create site with title exceeding max char limit (256) in request body			Site should not be created response code: 417			
6			create site with empty title in request body			Site should not be created (title is required) response code: 417			
7			create site with null title in request body			Site should not be created (title is required) response code: 417			
8			create site with title as integer type in request body			Site should not be created response code: 417			
9		Title Field - Security	create site with title as JS script injection in request body			Site should be created (input sanitized) response code: 200			
10			create site with title as SQL injection in request body			Site should be created (input sanitized) response code: 200			
11			create site with title as special characters in request body			Site should be created successfully response code: 200			
12			create site with title as directory traversal path (../..) in request body			Site should be created (input sanitized) response code: 200			
13		Domain Field - Valid	create site with valid unique domain in request body			Site should be created successfully response code: 200			
14			create site with domain at max char limit in request body			Site should be created successfully response code: 200			
15			create site with domain at min char limit (1) in request body			Site should be created successfully response code: 200			
16			create site with domain containing lowercase alphanumeric in request body			Site should be created successfully response code: 200			
17			create site with domain containing hyphens in request body			Site should be created successfully response code: 200			
18		Domain Field - Invalid	create site with empty domain in request body			Site should not be created (domain is required) response code: 417			
19			create site with null domain in request body			Site should not be created (domain is required) response code: 417			
20			create site with domain as integer type in request body			Site should not be created response code: 417			
21			create site with domain containing uppercase letters in request body			Site should not be created (invalid domain format) response code: 417			
22			create site with domain containing spaces in request body			Site should not be created (invalid domain format) response code: 417			
23			create site with domain starting with hyphen in request body			Site should not be created (invalid domain format) response code: 417			
24			create site with domain ending with hyphen in request body			Site should not be created (invalid domain format) response code: 417			
25			create site with domain containing consecutive hyphens in request body			Site should not be created (invalid domain format) response code: 417			
26			create site with domain containing underscore in request body			Site should not be created (invalid domain format) response code: 417			
27			create site with domain containing special characters in request body			Site should not be created (invalid domain format) response code: 417			
28			create site with domain containing period/dot in request body			Site should not be created (invalid domain format) response code: 417			

29	Domain - Uniqueness	create site with domain that already exists in request body	Site should not be created (duplicate domain) response code: 417
30		create site with domain used by deleted site in request body	Site should be created (domain reusable) response code: 200
31	Domain - Security	create site with domain as JS script injection in request body	Site should not be created (invalid domain) response code: 417
32		create site with domain as SQL injection in request body	Site should not be created (invalid domain) response code: 417
33		create site with domain as directory traversal path in request body	Site should not be created (invalid domain) response code: 417
34		create site with domain as HTML tags in request body	Site should not be created (invalid domain) response code: 417
35	Logo URL - Valid	create site with valid logo_url (jpg extension) in request body	Site should be created successfully response code: 200
36		create site with valid logo_url (jpeg extension) in request body	Site should be created successfully response code: 200
37		create site with valid logo_url (png extension) in request body	Site should be created successfully response code: 200
38		create site with valid logo_url (svg extension) in request body	Site should be created successfully response code: 200
39	Logo URL - Invalid	create site with empty logo_url in request body	Site should not be created (logo_url is required) response code: 417
40		create site with null logo_url in request body	Site should not be created (logo_url is required) response code: 417
41		create site with logo_url as gif extension in request body	Site should not be created (invalid image format) response code: 417
42		create site with logo_url as document file in request body	Site should not be created (invalid image format) response code: 417
43		create site with logo_url as video file in request body	Site should not be created (invalid image format) response code: 417
44		create site with invalid logo_url format in request body	Site should not be created (invalid URL format) response code: 417
45		create site with logo_url as integer type in request body	Site should not be created response code: 417
46	Logo URL - Security	create site with logo_url as JS script injection in request body	Site should not be created (invalid URL) response code: 417
47		create site with logo_url as SQL injection in request body	Site should not be created (invalid URL) response code: 417
48		create site with logo_url as directory traversal path in request body	Site should not be created (invalid URL) response code: 417
49	Primary Color - Valid	create site with valid primary_color hash (#121212) in request body	Site should be created successfully response code: 200
50		create site with primary_color as 3-digit hash (###) in request body	Site should be created successfully response code: 200
51		create site with primary_color lowercase hash (abcdef) in request body	Site should be created successfully response code: 200
52		create site with primary_color uppercase hash (ABCDEF) in request body	Site should be created successfully response code: 200
53	Primary Color - Invalid	create site with empty primary_color in request body	Site should not be created (primary_color is required) response code: 417
54		create site with null primary_color in request body	Site should not be created (primary_color is required) response code: 417
55		create site with primary_color without hash symbol in request body	Site should not be created (invalid color format) response code: 417
56		create site with primary_color as invalid hex chars in request body	Site should not be created (invalid color format) response code: 417
57		create site with primary_color exceeding 7 chars in request body	Site should not be created (invalid color format) response code: 417
58		create site with primary_color as integer type in request body	Site should not be created response code: 417

59		create site with primary_color as RGB format in request body	Site should not be created (only hash code accepted) response code: 417
60	Primary Color - Security	create site with primary_color as JS script injection in request body	Site should not be created (invalid color) response code: 417
61		create site with primary_color as SQL injection in request body	Site should not be created (invalid color) response code: 417
62	Secondary Color - Valid	create site with valid secondary_color hash (#c8c6fd) in request body	Site should be created successfully response code: 200
63		create site with secondary_color as 3-digit hash (#ABC) in request body	Site should be created successfully response code: 200
64	Secondary Color - Invalid	create site with empty secondary_color in request body	Site should not be created (secondary_color is required) response code: 417
65		create site with null secondary_color in request body	Site should not be created (secondary_color is required) response code: 417
66	Secondary Color - Security	create site with secondary_color without hash symbol in request body	Site should not be created (invalid color format) response code: 417
67		create site with secondary_color as invalid hex chars in request body	Site should not be created (invalid color format) response code: 417
68		create site with secondary_color as integer type in request body	Site should not be created response code: 417
69		create site with secondary_color as JS script in request body	Site should not be created (invalid color) response code: 417
70	Layout Field - Valid	create site with secondary_color as SQL injection in request body	Site should not be created (invalid color) response code: 417
71		create site with valid layout theme element name in request body	Site should be created with selected layout response code: 200
72		create site without layout field in request body	Site should be created with default layout response code: 200
73	Layout Field - Invalid	create site with layout as empty string in request body	Site should be created with default layout response code: 200
74		create site with layout as non-existent theme element name in request body	Site should not be created (invalid theme element) response code: 404
75		create site with layout as integer type in request body	Site should not be created (layout must be string) response code: 417
76		create site with layout as invalid theme element name in request body	Site should not be created (theme element not found) response code: 404
77	Layout - Security	create site with layout as decimal in request body	Site should not be created (layout must be string) response code: 417
78		create site with layout as boolean in request body	Site should not be created (layout must be string) response code: 417
79		create site with layout as JS script injection in request body	Site should not be created (invalid theme element) response code: 404
80	Layout - Security	create site with layout as SQL injection in request body	Site should not be created (invalid theme element) response code: 404
81		create site with layout as directory traversal path in request body	Site should not be created (invalid theme element) response code: 404
82		create site with layout as HTML tags in request body	Site should not be created (invalid theme element) response code: 404
83	Layout - String Validation	create site with layout as special characters in request body	Site should not be created (invalid theme element) response code: 404
84		create site with layout exceeding max char limit in request body	Site should not be created (exceeds limit) response code: 417
85		create site with layout as null in request body	Site should be created with default layout response code: 200
86	Missing Required Fields	create site with layout containing whitespace in request body	Site should not be created (invalid theme element) response code: 404
87		create site without title field in request body	Site should not be created (title is required) response code: 417
88		create site without domain field in request body	Site should not be created (domain is required) response code: 417

89		create site without logo_url field in request body	Site should not be created (logo_url is required) response code: 417
90		create site without primary_color field in request body	Site should not be created (primary_color is required) response code: 417
91		create site without secondary_color field in request body	Site should not be created (secondary_color is required) response code: 417
92		create site with only title field in request body	Site should not be created (missing required fields) response code: 417
93	Edge Cases	create site with empty JSON payload	Site should not be created (missing required fields) response code: 417
94		create site with malformed JSON payload	API returns bad request error (invalid JSON) response code: 400
95		create site with extra/unexpected fields in payload	Site should be created (extra fields ignored) response code: 200
96		GET request to POST /api/sites endpoint (method not allowed)	API returns method not allowed error response code: 405
97		PUT request to POST /api/sites endpoint (method not allowed)	API returns method not allowed error response code: 405
98		DELETE request to POST /api/sites endpoint (method not allowed)	API returns method not allowed error response code: 405
99		create site with all fields as null in request body	Site should not be created (missing required fields) response code: 417
100		create site with whitespace only in required string fields	Site should not be created (invalid input) response code: 417
101		create multiple sites concurrently with same domain	Only one site created, others return conflict response code: 409
102	Response Validation	Verify POST success response contains site id and all submitted fields	Response includes site id, title, domain, colors, logo_url response code: 200
103		Verify POST error response contains validation error for missing title	Response includes validation error for title field response code: 417
104		Verify POST error response contains conflict error for duplicate domain	Response includes conflict error for domain response code: 409
