

API Endpoint: POST /api/sites/{site_id}/instances/{instance_id}/pages				Payload Schema: { "title": "string", "description": "string", "status": boolean, "icon": "string", "order": int, "header": "string", "footer": "string", "lang": "string", "thumbnail_url": "string", "related_id": int }		Required Fields: title, status Field Validations: - title: max 255 chars - status: boolean - icon/thumbnail_url: mutually exclusive (use one or the other) - lang: only 'en' or 'es' - order: positive integer only - thumbnail_url: valid URL format - related_id: must be page id from same instance (not from other sites or deleted instances)			
Add pages to an instance									
SN	Test ID	Test module	Test scenario	Test steps	Test data	Expected output	Actual output	Test result	Remarks
1		Instance Page Add - Valid	create page with all valid fields in payload			Page should be created successfully response code: 200			
2			create page with mandatory fields only (title, status) in payload			Page should be created successfully response code: 200			
3		Title Field - Valid	create page with title at max char limit (255) in request body			Page should be created successfully response code: 200			
4			create page with title at min char limit (1) in request body			Page should be created successfully response code: 200			
5		Title Field - Invalid	create page with title exceeding max char limit (256) in request body			Page should not be created response code: 417			
6			create page with title as empty string in request body			Page should not be created (title required) response code: 417			
7			create page with title as null in request body			Page should not be created (title required) response code: 417			
8			create page with title as integer type in request body			Page should not be created response code: 417			
9			create page without title field in request body			Page should not be created (title required) response code: 417			
10		Title Field - Security	create page with title as JS script injection in request body			Page should be created (input sanitized) response code: 200			
11		Title Field - Boundary	create page with title as extremely long string (10000+ chars) in request body		{"title": "[10000+ chars]", "status": true}	Page should be created (text field handles long input) response code: 200			Boundary - Long Char
12			create page with title as max integer (2147483647) in request body		{"title": 2147483647, "status": true}	Page should not be created (wrong type) response code: 417			Boundary - Max Int
13			create page with title as SQL injection in request body			Page should be created (input sanitized) response code: 200			
14			create page with title as special characters in request body			Page should be created successfully response code: 200			
15		Status Field - Valid	create page with status as true in request body			Page should be created successfully response code: 200			
16			create page with status as false in request body			Page should be created successfully response code: 200			
17		Status Field - Invalid	create page with status as integer (1) in request body			Page should be created successfully response code: 200			
18			create page with status as integer (0) in request body			Page should be created successfully response code: 200			
19			create page with status as null in request body			Page should not be created (status required) response code: 417			
20			create page with status as empty string in request body			Page should not be created (status required) response code: 417			
21			create page without status field in request body			Page should not be created (status required) response code: 417			

22	Description Field - Valid	create page with valid description text in request body		Page should be created successfully response code: 200	
23		create page with description as long text in request body		Page should be created successfully response code: 200	
24		create page with description as HTML content in request body		Page should be created successfully response code: 200	
25	Description Field - Invalid	create page with description as integer type in request body		Page should not be created response code: 417	
26	Description Field - Security	create page with description as JS script injection in request body		Page should be created (input sanitized) response code: 200	
27	Description Field - Boundary	create page with description as extremely long string (100000+ chars) in request body	{ "title": "Test", "status": true, "description": "[100000+ chars]" }, { "title": "Test", "status": true, "description": "2147483647" }	Page should be created (text field handles long input) response code: 200	Boundary - Long Char
28		create page with description as max integer (2147483647) in request body		Page should not be created (wrong type) response code: 417	Boundary - Max Int
29		create page with description as SQL injection in request body		Page should be created (input sanitized) response code: 200	
30	Icon Field - Valid	create page with valid icon class name in request body		Page should be created successfully response code: 200	
31		create page with icon field only (no thumbnail_url) in request body		Page should be created successfully response code: 200	
32		create page with both icon and thumbnail_url in request body		Page should not be created (mutually exclusive) response code: 417	
33	Icon Field - Boundary	create page with icon as extremely long string (10000+ chars) in request body	{ "title": "Test", "status": true, "icon": "[10000+ chars]" }, { "title": "Test", "status": true, "icon": "2147483647" }	Page should be created (text field handles long input) response code: 200	Boundary - Long Char
34		create page with icon as max integer (2147483647) in request body		Page should not be created (wrong type) response code: 417	Boundary - Max Int
35		create page with icon as integer type in request body		Page should not be created response code: 417	
36	Thumbnail URL Field - Valid	create page with valid thumbnail_url in request body		Page should be created successfully response code: 200	
37		create page with thumbnail_url only (no icon) in request body		Page should be created successfully response code: 200	
38		create page with invalid thumbnail_url format in request body		Page should not be created response code: 417	
39	Thumbnail URL Field - Boundary	create page with thumbnail_url as extremely long URL (10000+ chars) in request body	{ "title": "Test", "status": true, "thumbnail_url": "https://[10000+ chars]" }, { "title": "Test", "status": true, "thumbnail_url": "2147483647" }	Page should be created (text field handles long input) response code: 200	Boundary - Long Char
40		create page with thumbnail_url as max integer (2147483647) in request body		Page should not be created (wrong type) response code: 417	Boundary - Max Int
41		create page with thumbnail_url as plain text in request body		Page should not be created response code: 417	
42		create page with both thumbnail_url and icon in request body		Page should not be created (mutually exclusive) response code: 417	
43	Order Field - Valid	create page with order as positive integer (1) in request body		Page should be created successfully response code: 200	
44		create page with order as large positive integer (999) in request body		Page should be created successfully response code: 200	
45		create page with order as negative integer (-1) in request body		Page should not be created response code: 417	

46	Order Field - Boundary	create page with order as max integer (2147483647) in request body	{ "title": "Test", "status": true, "order": 2147483647 }	Page should be created successfully response code: 200	Boundary - Max Int
47		create page with order exceeding max int (9999999999999999) in request body	{ "title": "Test", "status": true, "order": 9999999999999999 }	Server should handle gracefully (converts to exponential) response code: 417 or 500	Boundary - Overflow
48		create page with order as zero (0) in request body		Page should not be created response code: 417	
49		create page with order as string type in request body		Page should not be created response code: 417	
50		create page with order as decimal number in request body		Page should not be created response code: 417	
51	Lang Field - Valid	create page with lang as 'en' in request body	{ "title": "Test", "status": true, "lang": "[10000+ chars]" }	Page should be created successfully response code: 200	
52		create page with lang as 'es' in request body		Page should be created successfully response code: 200	
53	Lang Field - Invalid	create page with lang as invalid string (e.g., 'fr') in request body		Page should not be created response code: 417	
54	Lang Field - Boundary	create page with lang as extremely long string (10000+ chars) in request body		Page should be created (text field handles long input) response code: 200	Boundary - Long Char
55		create page with lang as max integer (2147483647) in request body		Page should not be created (wrong type) response code: 417	Boundary - Max Int
56		create page with lang as 'EN' (uppercase) in request body		Page should not be created (case sensitive) response code: 417	
57		create page with lang as empty string in request body		Page should not be created response code: 417	
58		create page with lang as integer type in request body		Page should not be created response code: 417	
59	Header Field - Valid	create page with valid header text in request body		Page should be created successfully response code: 200	
60		create page with header as HTML content in request body		Page should be created successfully response code: 200	
61	Header Field - Security	create page with header as JS script injection in request body	{ "title": "Test", "status": true, "header": "2147483647" }	Page should be created (input sanitized) response code: 200	
62	Header Field - Boundary	create page with header as extremely long string (100000+ chars) in request body		Page should be created (text field handles long input) response code: 200	Boundary - Long Char
63		create page with header as max integer (2147483647) in request body		Page should not be created (wrong type) response code: 417	Boundary - Max Int
64		create page with header as SQL injection in request body		Page should be created (input sanitized) response code: 200	
65	Footer Field - Valid	create page with valid footer text in request body	{ "title": "Test", "status": true, "footer": "[100000+ chars]" }	Page should be created successfully response code: 200	
66		create page with footer as HTML content in request body		Page should be created successfully response code: 200	
67	Footer Field - Security	create page with footer as JS script injection in request body		Page should be created (input sanitized) response code: 200	
68		create page with footer as SQL injection in request body		Page should be created (input sanitized) response code: 200	
70	Footer Field - Boundary	create page with footer as extremely long string (100000+ chars) in request body		Page should be created (text field handles long input) response code: 200	Boundary - Long Char
69	Related ID Field - Valid	create page with valid related_id (existing page id from same instance) in request body		Page should be created successfully response code: 200	

71		create page with footer as large integer (2147483647) in request body	{ "title": "Test", "status": true, "footer": 2147483647 }	Page should not be created (wrong type) response code: 417	Boundary - Large Int
72		create page with related_id as null in request body		Page should be created successfully (no parent) response code: 200	
73		create page with footer as extremely long string (100000+ chars) in request body	{ "title": "Test", "status": true, "footer": "[100000+ character string]" }	Server should handle gracefully without exception response code: 200 or 417	Boundary Test - Long Input
74		create page with related_id from deleted instance in request body		Page should not be created response code: 417	
75		create page with related_id as non-existent page id in request body		Page should not be created response code: 404	
76		create page with related_id as negative integer in request body		Page should not be created response code: 417	
77		create page with related_id as string type in request body		Page should not be created response code: 417	
78		create page with related_id exceeding max int (9999999999999999) in request body	{ "title": "Test", "status": true, "related_id": 9999999999999999 }	Server should handle gracefully (converts to exponential) response code: 417 or 500	Boundary - Overflow
79		create page with related_id as zero (0) in request body		Page should not be created response code: 417	
80	URL Path - Invalid	create page with non-existent site_id in URL path		Page should not be created response code: 404	
81	Authorization	create page without authentication token		Page should not be created response code: 401	
82		create page with invalid authentication token		Page should not be created response code: 401	
83		create page with expired authentication token		Page should not be created response code: 401
